- Calcium Ascorbate Powder/Fine Powder (100 Mesh)
- Sodium Ascorbate Powder/Fine Powder (100 Mesh)
- Ascorbyl Palmitate

### **Direct Compressible Granular and Coated**

- Ascorbic Acid DC-97 with Starch or Starch Free
- Calcium Ascorbate DC-97 Starch Free
- Sodium Ascorbate DC-99
- Ascorbic Acid Coated 97 %

## The discovery and history of Vitamin C

In the early 1930's Ascorbic Acid was discovered by a Hungarian biochemist researcher. In 1933 Vitamin C was the first vitamin to be chemically produced. Today VC is available as a generic medication and over-the-counter drug or vitamin supplement. Lately, VC supplements have increased in popularity due to the beneficial health reasons in supporting the immune system. Research has proven VC to be very important compounds that can oxidate free radicals. The main raw material for the production of Vitamin C (Ascorbic Acid) is corn or wheat. Today, most Vitamin C is synthetically produced in China and is derived from corn starch, corn sugar or rice starch. We are proud to supply VC from some of the most established reputable global manufacturers.

**Vitamin C is a water-soluble vitamin and offers the following benefits:**

- Strong growth and repair of tissues and cells
- healthy skin, tendons and blood vessels
- helps and promotes wounds to heal faster
- keeps bones and teeth healthy
